Solutions to Reduce Risk, Ensure Compliance and Speed Checkout and Onboarding

Melissa's identity verification solutions are designed for organisations that need high-speed, rigorous Know Your Customer (KYC) & Anti Money Laundering (AML) checks to meet compliance requirements and prevent fraud. They work in real time to provide a seamless customer experience and easily integrates into your applications, web forms and existing IT systems to give you flexible options for your data quality needs.

Melissa offers two flexible variants of identity verification to suit any business need.

Personator Identity captures accurate personal details that can be leveraged for processes such as marketing, fulfillment, and even fraud prevention. This eIDV (electronic identity verification) option uses a layered approach of contact data quality verification, proof of address, age verification & 2+2 checks as well as screening of individuals against sanctions and international watchlists.

The ID & Document Scan Verification is a mobile KYC approach to verify a person's identity from their smartphone while using the power of AI, biometrics and proof of life, all in an easy 1-2-3 process.

What Makes Our Identity Verification Products Unique

1. We are the Address Experts

Melissa began with ZIP+4 and turned into so much more. Our deep domain address expertise began in 1985 and has grown to include complete contact and identity verification. Our unique address verification engine has been tweaked and fine-tuned over the course of decades and is coupled with strong partnerships with global postal authorities. It implements cutting-edge artificial intelligence and fuzzy matching to ensure your addresses are correct, up-to-date and deliverable. We ensure the identity of a consumer or business is accurate starting with the foundation – contact data verification.

2. Data Quality Is Built into the Fabric of Every Layer

Unlike other providers, data quality is woven into the fabric of every layer of our identity products. We don't simply check an identity against a static list. We verify each piece of the identity puzzle in real time before it gets passed to the next step. This not only ensures the customer data is accurate, which has a multitude of benefits in itself, but also reduces the number of false positives and negatives that are returned while increasing matching rates.

3. Individual Integrations

Each layer is built upon a previous check and has its own dedicated engine for correcting, parsing and understanding names and addresses. We have the unique advantage of having separate data quality tools built into each identity product. These crucial data quality abilities are missing from other identity verification solutions, but are absolutely integral to increase the matching accuracy.

4. One Source for All Data Quality Needs

Our datasets and knowledge base are unmatched. Billions of constantly updated records and multi-sourced reference data are utilised so customer data is not simply matched against a static list – it's verified in real time with consistently updated sources.

PERSONATOR Identity

Global AML & KYC Check

Designed for organisations that need high-quality, real-time eIDV, Personator Identity is delivered using a layered approach of data quality checks. Each has a dedicated engine that corrects, parses and understands names and addresses, empowering organisations to safely onboard new customers while ensuring the greatest protection against fraud.

3. Contact Data Verification

2. Proof of Address

1. eIDV, 2+2 & Mobile Doc Scan

0. Sanction, PEP & Deceased Screening

3. Contact Data Verification

The first step to identity resolution: contact data verification. Melissa is the only eIDV service that employs a data quality verification layer that verifies each piece of the identity puzzle before it gets passed to the next step. Verify global addresses, emails, phones & recognize 6+ million last names & 4+ million first names.

2. Proof of Address

Once contact elements are verified, ensure the person actually lives at the provided address. Leverage 2.1 billion records to perform a proof-of-address check. It's a light-weight, quick check that goes a long way to providing enhanced fraud prevention & is available in select countries including Germany, U.S., U.K., & many others.

1. eIDV, 2+2 & Mobile Doc Scan

eIDV: Verify SSN, national ID & DOB to prevent underage or consumer-not-present activities.

2+2: A more advanced mode of eIDV uses 2 different sources to corroborate & verify 2 pieces of information. Check a person's ID against relevant sources like electoral rolls or credit & court data.

Mobile Doc Scan: See details on next page.

0. Sanction, PEP & Deceased Screening

Gain the greatest confidence in an individual or entity after they have been screened through sanctions lists, Politically Exposed Persons, and other federal & international restricted party watch lists including a Negative News Screening. All reference data which a user is screened against is refreshed daily in our real-time environments.

Mobile Document Scan App

Need a streamlined, easy-to-use approach to rapid onboarding and robust security? Melissa's mobile identity solution is a quick way to capture and verify customer ID documents and securely store consumer due diligence reports with full audit trails. Reduce fraud, improve customer engagement and ensure peace of mind – in a matter of seconds.

Document Check

MRZ and OCR technologies instantly identify document type, extract client data and populates data into relevant systems, like CRM platforms, with no manual entry.

Biometrics Check

Smart facial recognition and comparison algorithms recognise a match between a selfie and an ID image and distinguishes changes like facial hair, makeup, hairstyle and more.

Liveness Check

Determines if the person behind the device is live and not a static image by distinguishing eye movement to ensure user authentication.

Compliance Reporting

Customer due diligence reports and full audit trails are generated and stored. All documents and reports are organisation-controlled and may be evaluated at any time.
