

Fone*Data

Increase U.S & Canadian Phone Number Accuracy

Fone*Data is an area code/prefix database in .csv (comma delimited) format that contains all the area codes and telephone number prefixes within the United States and Canada. Fone*Data matches your data against the following databases: Telephone County Name; MSA (Multiple Historical Area); Historical; and LATA (Local Access and Transport Area).

Updated Area Codes

Use Fone*Data to avoid the frustration that occurs when area codes change or split. Each quarterly update of Fone*Data contains the existing, or old area codes, along with the new area codes scheduled to replace them.

Add Marketing & Location Data

Fone*Data adds valuable marketing and location data to your existing records based on telephone numbers. Enhance customer programs by linking area code and prefix data to location information like city, state, county, time zone, and latitude and longitude coordinates.

Cross Reference Area Codes and ZIP™ Codes

Fone*Data also allows you to match up telephone numbers to ZIP Code™ data. The database includes up to three commonly used ZIP codes for each area code and prefix combination. Although there is no exact match between ZIP codes and telephone numbers, this allows you to form loose geographical associations.

Benefits & Features:

- Includes Lat/Long coordinates
- Updates U.S. & Canadian numbers
- Reduce data entry keystrokes
- Automatically corrects area codes
- Links area code/prefix to ZIP codes
- Updated quarterly
- Available as a download

Fone*Data	
Area Code (NPA)	714
