

GEO*Data

Link Customer Records to Geographic and Demographic Data

GEO*Data empowers precision marketing strategies, mapping and distance applications, spatial analytics and more. Complete your customer records with:

- Latitude & Longitude Coordinates to the ZIP+4 Code Level
- Census Tract & Block Numbers Link Addresses to Census Demographics
- County FIPS Codes

GEO*Data File	
ZIP+4 92688-2112
County FIPS Code 06059
Latitude 33.6468
Longitude -117.6002
Census Tract 032026
Census Block 1002

Utilize Geographic Data for Spatial Analysis

Pinpoint customer clusters, refine sales territories and search your database to find all records within a specified number of miles from a central point using the ZIP+4 Code of the original address.

Identify Your Best Customers & Find More Just Like Them

- Create custom lookup routines
- Fine-tune marketing efforts
- Identify common traits of your best customers
- Target consumers by exact locality

Turn Address Data into Practical & Powerful Information

GEO*Data increases customer understanding by appending valuable geographic information linked to the address.

- **Assign geocodes and latitude/longitude information** for marketing, spatial analysis, & trading area definitions
- **Analyze customers geographically** & determine areas of under-demand & over-saturation
- **Calculate distances for proximity and site location analysis** to help identify the nearest distribution point or business location to your customer
- **Enhance your address files with third-party demographic data** for profiling, market analysis & modeling applications
